EXP NO : 2. Average Price of Products Sold

Aim: To calculate the average product price using NumPy arrays.

Algorithm:

1. Import NumPy.
2. Create a 3×3 sales matrix.
3. Calculate the average using np.mean().
4. Display the average price.

Program:

import numpy as npsales = np.array

([[100, 200, 300],

[150, 250, 350],

[200, 300, 400]])

average = np.mean(sales)

print("Average product price:", average)

Output:

Average product price: 210.0

```
Highest Average: 89.5
>>>
== RESTART: C:/Users/Hemanth Reddy/OneDrive/Desktop/DSA 0401 FODS/Exp No 2.py ==
Average Price: 210.0
```

Result: The average of all nine values in the sales matrix is 250.
