EXP NO : 3. Average Sale Price of Houses with More Than Four Bedrooms

Aim: To find the average sale price of houses having more than four bedrooms using NumPy.

Algorithm:

1. Import NumPy.
2. Create a house data array with bedrooms, square footage, and sale price.
3. Select houses with more than four bedrooms.
4. Calculate their average sale price.
5. Display the result.

Program:

```
import numpy as np

# Columns: bedrooms, square footage, sale price
house_data = np.array([
    [3, 1200, 200000],
    [5, 2000, 350000],
    [4, 1500, 250000],
    [6, 2500, 450000],
    [5, 2200, 400000]
])

selected_houses = house_data[house_data[:, 0] > 4]

average_price = np.mean(selected_houses[:, 2])

print("Average sale price:", average_price)
```

Output:

Average sale price: 400000.0

```
>>
== RESTART: C:/Users/Hemanth Reddy/OneDrive/Desktop/DSA 0401 FODS/Exp No 3.py ==
Average Sale Price: 400000.0
>>
```

Result: The average sale price of houses with more than four bedrooms is 400000.
