EXP NO : 4. Total Sales and Percentage Increase Using NumPy

Aim: To calculate the total annual sales and percentage increase from the first quarter to the fourth quarter using NumPy.

Algorithm:

1. Import NumPy.
2. Create an array containing quarterly sales.
3. Calculate total sales using np.sum().
4. Calculate percentage increase from Q1 to Q4.
5. Display the results.

Program:

```
import numpy as np

sales_data = np.array([10000, 15000, 18000, 20000])

total_sales = np.sum(sales_data)

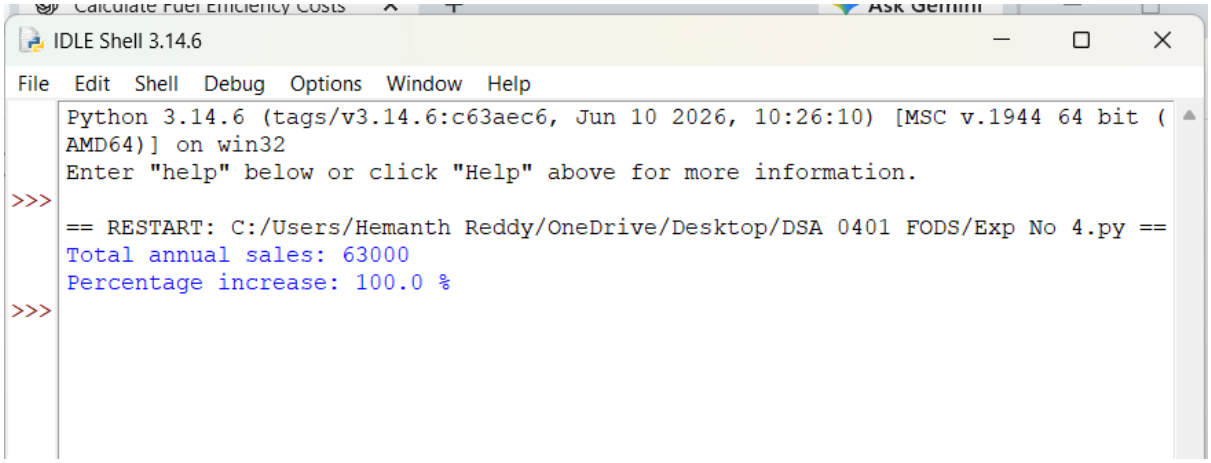

increase = ((sales_data[3] - sales_data[0]) /
        sales_data[0]) * 100

print("Total annual sales:", total_sales)
print("Percentage increase:", increase, "%")
```

Output:

Total annual sales: 63000

Percentage increase: 100.0 %

Result: The total annual sales are 63,000, and the percentage increase from the first quarter to the fourth quarter is 100%.
